LumaBot

Get patients to the next step with fewer phone calls and headaches. LumaBot, Luma's web-based, actionable chatbot, has the convenience of instant messaging and the power of your Luma workflows. It helps staff and patients take care of more, so you can do more with less.

FOR PATIENTS

Taking care of healthcare needs

When a patient needs help, they don't want to wait on hold or struggle with an automated bot that's all words and no action. LumaBot taps into the power of the full Luma platform and its EHR integration to get them to the next step.

LumaBot empowers patients to:

Schedule a new appointment.

Complete COVID-19 screening.
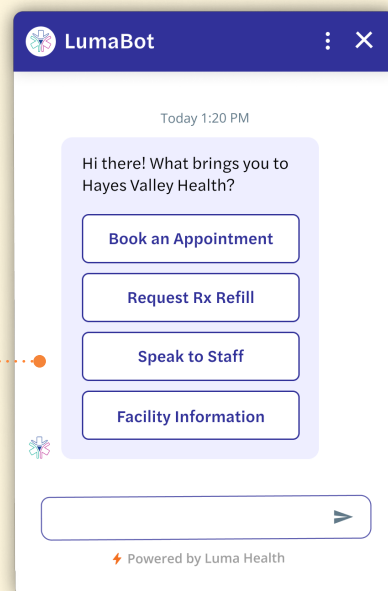

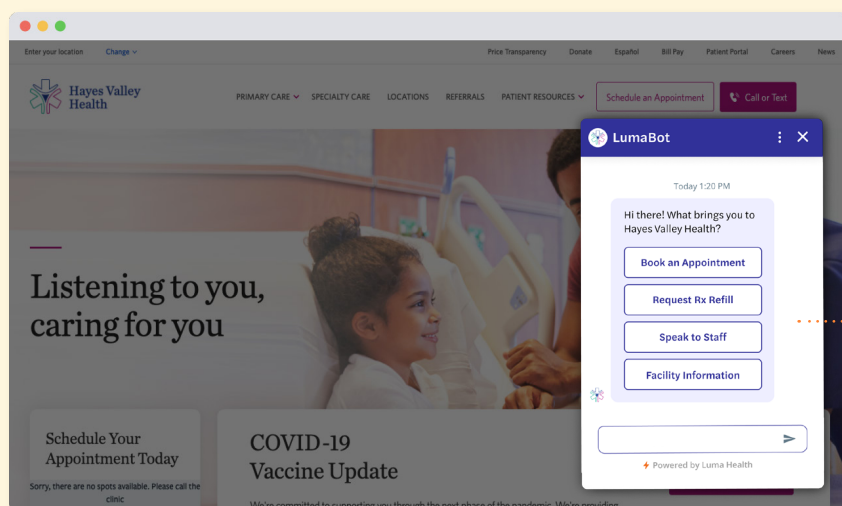

Cancel or reschedule an appointment.

Get directions or answers to FAQs.

Request an Rx refill.

Ask staff a question.

Taking care of business

With full schedules inside the clinic walls and a full plate of patient needs outside the walls, staff and clinicians have more tasks than hours in the day. LumaBot takes on routine tasks for them.

LumaBot frees up time by:

Reducing phone calls during clinic hours and voicemails after hours.

Triaging questions or requests that need follow-up to a queue for later.

Taking care of common patient requests.

Pulling in the patient's history, so calling back is more efficient.
