

# Schedule with Google

**Transform Google searches to booked appointments with Luma Health.** Simplify the process of finding and scheduling visits, for both patients and office staff. Luma's EHR-integrated solution eliminates a barrier to care by automating a manual process. Ensure that potential patients become patients.

## STAND OUT IN THE MARKET

### Make it easy for patients to find your practice

Research indicates that up to 90% of patients search for health information online. If they find your practice, how do you stop their scroll and get them in the door? Provide an opportunity to click through to available appointments and schedule directly from your practice's Google My Business page. Updated information is automatically synced with Google, so patients always know what's available – without time-consuming phone calls to your staff.

## Customize appointments as much as needed

Your practice is unique, and showing patients their appointment options makes them more likely to choose you over a competitor. Luma tailors appointment options to your providers, locations, and appointment types. When patients click Book, the next thing they see is a list of appointments. It's never been easier to choose the perfect match.

### Schedule with Google empowers patients to:

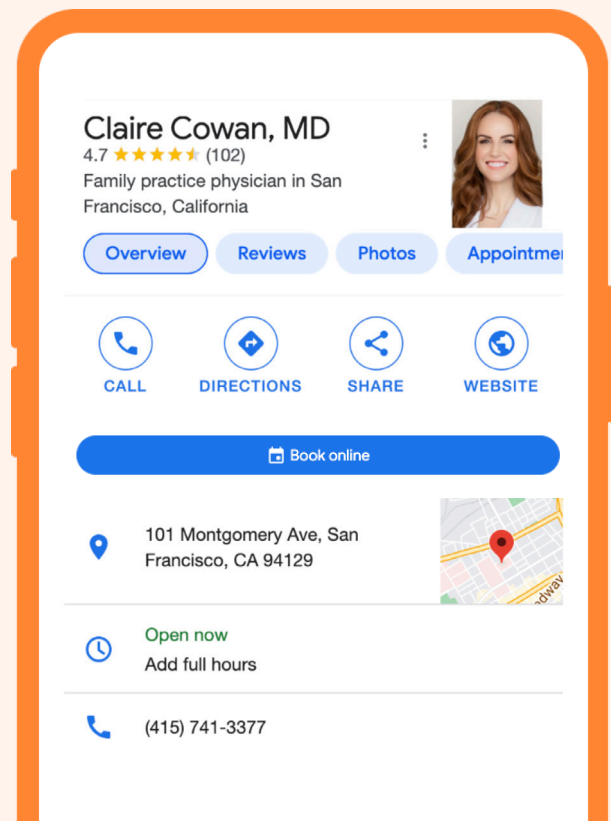

Book appointments directly from Google's My Business page.

View and select all available slots across to find a perfect time

Make it in the door with your full EHR-integrated workflows, including SMS waitlist offers, actionable reminders, and more
